# Writing Text in R Markdown

## Use RStudio's Visual Editor

The screenshot shows the RStudio interface with a file named "R Markdown Example.Rmd" open. The editor is in Visual Editor mode, as indicated by the icon in the top right corner (a document with a pencil) which is circled in yellow. The document content is as follows:

```
1 ---
2 title: "R Markdown Example"
3 author: "Matt Worthington"
4 date: "3/18/2021"
5 output:
6   html_document: default
7   pdf_document: default
8 ---
9
10 {r setup, include=FALSE}
11 knitr::opts_chunk$set(echo = TRUE)
12
13
14 ## R Markdown
15
16 This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word
17 documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.
18
19 When you click the Knit button a document will be generated that includes both content as well as the
20 output of any embedded R code chunks within the document. You can embed an R code chunk like this:
```

The R code chunk starting at line 10 is highlighted in a light blue box. The text in the document is rendered in a monospaced font, and the URL is a clickable link.
